

As called progress of reality by an economy

KURODA International

Takeshi Kuroda

The economy creates a wealth of life in the free economic system. And it comes with its volunteer. That is all insistence from the Chicago group for the free economic system.

A free economy is a free activity that gives reality and creation. This free activity is giving perpetuity as the result of voluntary reality.

These are the completeness of the free economic system claimed by the Chicago School.

Under all these realities, we have a world and all reality today. The economy is the center of society and life.

We have all progress of life by all systems. But under all these realities, there exists massive power as new kings in realities since all systems permit freedom.

Liberalism is an idea under its freedom, Independence, and responsibility. These justice are a justice of the Western camp, and a free economic system supports them.

We are given a full curiosity that all systems have growth and creation under their volunteer.

These systems are given under competition. That causes hierarchy. This is a reason we make all poor. Then we have a basic income of its systems coming new era.

Capitalism allows ownership and propers. The competition gives disparity. Then we have an idea called communism. But freedom is any base of permission of existence.

Under any consideration, we may seek a new world. Basic income is all base on the new system.

Creativity is a necessity, and we make create new systems. This is an endpoint of liberalism so that the east may ask for itself in the future.
