

Credo from KURODA International

2022/7/2

Takeshi Kuroda

Creation of the future requires new technology and all academic base—these open new worlds as new possibilities.

We propose all new ideas to the world under its business. We are trying to offer a new future.

Age of space, the development of all new technology based on academic progress is the reality we face. And education grows and realizes this possibility in reality.

The world all children could ask for their dream. That may not be an idea but only a fundament of reality.

Politics makes any possibility in reality. That is under their determination with the right plan.

National independence and autonomy are a priority for all nationalities that require we may not belong to any presence of the world.

That gives us an idea that we are trying to make a new reality with ours.

The dream may not be a dream but a reality. This is all our credo to the world.
