Create the future

Environmental requirements create the futures

KURODA International Foundation

Takeshi Kuroda

Environmental requirement is necessity from society and lives. As you consider all history has own progress with. To reach wisdom may ask own creation of the world but luck with following above. But all necessity is a key to all doors.

World must not away from all these laws. Luck to reach as caught all reality but catch itself we could ask all controls.

As all peoples behave as following above. To conquer means to have all control with wisdoms.

How the necessity show itself? All trend creates as such as so.

As any confusion as Covid 19 give itself to the world, World should ask own decision but necessity. That means Human have all possibility to seek the futures.

But more than to be wise, the world is only following environmental requirement. But with the other word could call them self as social demand. But this is all proofed with any histories.

That must be right decision to see the futures.
