The market is asking for its unification under free trade systems. To see all majors have the standardization of their systems and products,

The amount of capital is based on a new agreement in the market, and all business systems are standardized.

This is all proof that standardization of products and systems is acceptable in any market, especially with globalization.

All market has their specialty and originality. That is all secret we may access differently in each market.

Since we have a new reality in business, it has all progress that we need to reconstruct its system in the future.

All data is numbered in the computer, which works efficiently and uses. As we may see, all scandalization of business under same IT system that gathers all control and calculation of business.

In any market, we find its nature and habit that permit to access and work for that market.

How may we find self-superiority? That gives us an answer that a business system that wins every market competition has proof in reality.

That is only a reality in the global business environment and only a reality we are permitted. All these severe is the only reality in the world.

These give us an answer that a system of progress must be standardized in any business, and we must seek the future.
