

Great reset and stock market

Kuroda International Consulting

Takeshi Kuroda

It comes as Black Monday, but we may consider more than meltdown as default and market fail down.

We shall buy in the lowest of its price by any stocks. All new technology has all use in the future.

We are trying to make a new group of enterprises. Great reset gives priority to the liberal camp, so we are following as same as they are.

We must gather all our capital and ask for a new reality.

The world market may make a difference to a nation. We spend into Japan and Taiwan, China, and India.

Gathering all new technology may give us a unique possibility to create any reality in a region. That is what we are trying to do.
