Their life and progress philosophy is their origin as they seek all their dreams and ideals.

The world was under their beings. We may consider that if they step into the universe, their idea and originality are accepted as the 20th century, we faced a revolution.

Coming to space age, they are willing to make new realities under progress and eagerness.

These exist in their aspirations. This is reminiscent of the hare and tortoise and the ant and grasshopper fables.

They are leading the future and have taken all responsibility for the world. Former President Trump's unilateralism has given all the chaos in the current world.

They have the choice and freedom to seek their futures.

They have broken ancient and existing reality and history, and we have a new world, and even they are willing to step into their futures.

Their choice gives the world a change. And we have to know we have ours.

They are the dreamer to seek the future. All new technology and system are under the creation of an economy we may never reach. These are from their political bases under calculation by academics.

Any environment of society in any field, what can we find? Since they use all wisdom in their progress and plans.

We need the same reality as they are. This is our last challenge due to we have our futures.
