Takeshi Kuroda

The future has its possibilities as we have all the new changes today.

Then we see we have a choice. This is the reality of all politics. We have proposed all-new world designs.

The world has its truth, called a new world order. Instead of all these realities, we have proposed new world visions.

The world is shifting with reality today from the past to the future.

Planned national governance can be achieved in a political environment and foundation that provides the right financial, economic, military, and diplomatic choices and decisions in response to these realities.

But the world must ask for its future under all changes of self. This is why we must seek and act for our future.

There are also time limits to that reality. That means we need to act right now to create any reality that could be based on our future.

The military and industry can be the decisions of reality, and we have space technologies. And if all these are the decisions of all reality, we need our diplomacy to seek any realities.

Asia Union could base all these requests. Then, we may have our presence and world vision.

And we are facing a future that promises a new technological civilization. We dare to realize them with a world as you can find all our descriptions.

To be wise, all politics may be possible to realize all with a world, so we consult all new world to all politics.
