Create the future

Regional development in next-generation technology

KURODA International Foundation

Takeshi Kuroda

The next-generation transportation system in Hyperloop will connect all the core cities, and the development of the core cities will be made into smart cities under the agreement between the national politics and the regional politics. All transportation will be converted to the next-generation transportation network as an administrative agreement.

Society and life that transform everything into an IOT environment will be developed based on consensus in politics and industry.

These can realize domestic industry and development and social construction in full cooperation between politics and bureaucracy, industry and university.

The right consideration for education is that the child seeks the right self-growth, and his responsibility and independence give him participation in the right self to the world. In addition, free cost to college education and compulsory obligations to end up to college for all children can have choices for the future along with their abilities.

Society has embraced much better living standards, which are possible in the above technological innovations.

These can potentially be sought as an agreement on the development of the Eurasian continent at AIIB and as a standard for their social development in the unification of Asian countries.
