create the future

OPEC and new energy

KURODA International Foundation

Takeshi Kuroda

With own finance there is all circulation with age of new energy. All industrial environment may ask more than all progress of the futures.

There are all problems with OPEC. Oil goes with no use to the futures. Construction of new technology and system create new society and lives.

Waiting futures may be as same as all dreams. All new technology has a all use for lives and society.

With an international trade of Oils are huge amount of income for their government. There is a future even coming with new technology.

These give a vision for any measure of nations. We could expect the futures.

All these new energies could give a full expectation to the future above all new technology and systems.

There is all creation with a new world. There is more than all use with new systems and technologies. That we need all our participations.

There is a shift from past to the futures.

All these changes are asking who deserve and who fails.

We are stepping to the new world. These are as same as Rabbit and turtle parable.
