

All economic Recovery of ownership

Kuroda International

Takeshi Kuroda

New technology and system may ask for their ownership and cost. Free trade system could give its Oligopoly.

The economy competes with new technology and system that may occupy the whole market. It comes new economic wars.

It means that sheep turn into wolves. That is a bell that tells us it is over.

Then we may face a real first time. We have to remain the story of Ants and grasshoppers.

The wealth of the world is proof of the kingdom. We may face the new world.

We have to know that the truth is the only one that we may rely on.

As a new currency system cover new realities, we only have to follow.

These are rough sketches of the new economy. Who has permission to participate?

That new world asks for wealth and progress of new technology. As we see all occupations, we have to make a choice.

If politics take all control of the economy, they have a decision to realize anything new. These are required with all academic progress as they promise to realize them all.

There is no time, even a minute. We have been required a decision, and I did.
