

Participation in the world and handling with reality through Hong Kong

Kuroda International Foundation

Takeshi Kuroda

The world, which is based on the capital of Britain, has the ownership of capital and has reality. They have the reality that capital opens up the future. Companies create reality with their advanced technologies and systems. These two realities are true and only to seek reality. Capital and technology determine everything. Capital dominates the world. It has an owner and is given a worker. These give society and trend of life.

Hong Kong is the model. It has world standards because British capital has it. The standard of the world is reality.

Since China is under the jurisdiction of the Lee family, 13 council and 300 communities, the world's owners, do this.

We have a consideration of justice with China as an enemy and the transition to a new world order. The foundation of capital and the denial of justice and inhumane societies in the world have a transition to the future, along with a new lifestyle.

These liberal camps have world ownership, along with the justice of humanity. Inhumanitarians are denied by the world. This is the reality of Hong Kong.

Office to access the world.
