War gives all tragedy to people with its suffering and sorrows. That means we reach a moment through any history filled with wars.

The tears of the weak are the truth on the other side of war. That is why we need a new understanding of war as in Ukraine, and we face all reality in the world that we may not ignore.

Humanity is the same base for all peoples, giving us a decision and agreement for reality.

International society could make a new reality under a whole argument for the coming future.

That is an all-new attitude for a war. We need to know that the past has all history with wars.

That causes us to abandon wars for the future. On earth, we could abandon wars but ask for a new reality as participation in the universe. That may give us a new reality for the military environment.

All remarks are if all people ask its participate equally to the world, all above understanding is a based to create a new reality.

There we may share the same concept, and compliance equally shares the world.

I propose Power Politics as a new consensus of the international community that these agreements are in common sense and conscience.
