Takeshi Kuroda

With a new technological age, we are facing realities. There is a WW3 facing any realities. There are any plans from new world order.

They have justice called humanity. There justice is definition of the world.

Under govern world government from UN that we could seek no escape from.

Only to reveal any information and trying to cover the world that what we can do.

As we may know that new technology is new weapon and army condition. We must face equally to the world as build own justice against new world order.

As own presence to UN permanent councils we could argue with above.

The world only contains with give and take that is only laws.

As you may imagine to disclose any information who has a justice. And revolution and resistance may successfully own the world.

Who is trying to be a hero that what you have to know.
