

The war of capital

KURODA International Consulting

Takeshi Kuroda

The world is governed by capitalism. That comes to a war of capital today.

The mega fund has an investment in all new technology and system that gives a new future. Globalization makes its investment out of limitation to all markets.

We may imagine that there must be control in a world and guess the aims.

Equality is anytime conditioned to face equally to the world. We are forwarding its vision to the liberal camp. What can we see in their reality?

All these realities give us complete learning. All new technology is based on colossal capital and their group of facts.

There is planned that is the same as Black Monday from history. They are trying to own everything in the new world.

We must act ourselves to the coming reality. Great reset is the creation of the new world, and we have to ask that is there any possibilities we may ask any steps into the future.

So we need to relate to political power. And we need to build our reality.

The world is totally under control, forcing us to build our reality. We may try to settle our group, which is separated from Russia and China.

The capital could be based on all reality as exact as they are. And new free trade group is based on building new industries under new technology and systems.
