

The world decision against Russia

KURODA International

Takeshi Kuroda

All reality we have in Ukraine must be treated as war crimes. Due to all citizens being killed and invasion not being accepted, we need new world rules.

These aim to abandon wars and share the world equally with all nations and races.

All these agreements must be shared with all nations under its volunteer. All these agreements are based on a new world under its unification.

That means international society may not ignore and agree on new rules on nuclear weapons under its use and abandonment of self.

We may find all these, in reality, today as United nations and all conferences.

The construction of a new reality may be imagined as the abolition of armed forces in all nations, shared participation in space, and further cooperation in maintaining public order and self-defense.

And new reality came as cooperation with the universe. There we are expecting a new world.
