Collapse of free trade system

KURODA International Foundation

Takeshi Kuroda

The free trade system calls for its collapse in the oligopoly of the world. They have the emergence of a new elite, the creation of a new world.

These are the oligopoly of the world in the super elite, the reality of the new world, the formation of the New World Order.

This is what American Unilateralism really shows. Restoration of self-ownership calls for possession of world wealth.

These are that the nation is required to foster all industries in self-sufficiency and capital, and that the nation's self-sufficiency in advanced industries, core industries, and agriculture and livestock industries requires self-evaluation by the nation's self-management. , Breakthrough in diplomacy requires new security for oneself.

This is a renewed need for state to be controlled in politics, and participation in the world in political presence is maintained in its independence .

These are the separation and dispersal of all nations in the world in the presentation of self-philosophy, and participation in the reality of chaos and World War III is inevitable for nations to make choices.

This is to give a national judgement in military, industrial and space technology in reality.
