Create the future

A consideration for building an army

KURODA International Foundation

Takeshi Kuroda

The construction of the army is the only one that gains its own use for its applicability in reality. This has to be self-defining in the power balance of the world.

Space weapons, advanced equipment and weapons in the United States can obtain more than equality and demand victory in the reality of the war. IT, lasers, and advanced technologies have an absolute presence in that reality.

The absolute alliance of NATO allows them to easily have a world.

Reality recognition confronts the last enemy of the People's Republic of China, and the world seeks an end.

These were Italy, Germany, Japan in World War II, Russia in the Cold War, Iran, Iraq, Cuba, Afghanistan, Sudan, North Korea, all of which were following to the army of the liberal camp.

Therefore, the future war will completely divide the world into two and have World War III.

Politics has complete control over these, and the establishment of justice in the world in the advertising tower of the United Nations can no longer be denied as a reality.

The confrontation with these realities gains the development of the army in equality and gives independence in the world.

These are the only things that make it possible to grasp the reality and make the right decisions in the analysis, the strategy and tactics in the army, the command of the army in the commander, and the normal construction of the army.
