Unification of society and IOT services in a unified account

Standardize all services in a unified account. For the construction of services in a unified account for money services, communication services, social services, and Internet services, we would like to propose services along with the development of unified cards.

In the money service, it provides an environment where you can hold an account and send remittances to a unified account, and in the communication service, when accessing the unified account, unify all communication services and propose management in super applications. In social services, we will provide an environment for standardizing card services and accessing personal information for account access. For Internet services, standardize ID access to all services.

All of your usage data provides personal information for storage and access management in the cloud system.
