

KURODA International

Create the future

Local administration proposal

KURODA International Foundation

Takeshi Kuroda

At the city hall, we will share the advanced IT system with society and improve the society in the next-generation transportation system. Along with education, these can carry out local development in a new society and life, and call for the development of a new society with the participation of all citizens.

The advanced IT system provides a great deal of cooperation between the local government and daily life, and demands the provision of information and mutual communication.

Collaboration with industry provides information, know-how and systems in cutting-edge technology and design to all companies, and provides human resource development at community colleges in the region.

A lifelong learning environment for citizens provides citizen participation in IT systems.

To improve the core in the area, we will improve the living environment of the area by improving the central part of the area such as retail stores and restaurants, all information cores.

The local political standards for social development require beautiful social development in the next-generation technical standards in terms of order and maintenance, and carry out self-action and planning based on the administrative standards.

Declaration of zero environmental load will foster local industries as well as preferential tax treatment.
