Takeshi Kuroda

The World is governed by power. That means it is a decision of all realities.

Any construction of all reality has been explained by the power game. And we see this as permission to put ourselves into a reality.

Any justice may be ignored, but under all media with its control.

Under all these truths, we need a philosophy to construct our realities. That permits us to stand equally to the world.

As we see, bases are with the philosophy that could expand and build all realities. We know that the western camp has theirs. We may not follow, but we need our construction of them.

All these are based on the survival principle that progressed to the competition principle. And the new principle may be from a new philosophy.

World War 3<sup>rd</sup> is prepared, and the power should be in any decision we have with the world.

An equal reality that we have to prepare for ourselves. That may be the right decision for us to face any reality we have with the world.

To see all reality, we could make them surrounded by philosophy. It must be called a justice.

The soundness of reality must be needed by its core of reality. All those are from academic considerings, and we could ask for the use of them to build a nation.

Academic allows the possibility for us to seek any reality in the future. These are based on the reality of the nations.

We have an idea, of how we could stand equally to the world.
