Under reconstruction of the region under the measure of society 5.0, new transportation systems and core capital with the next generated standard.

New investment in all new infrastructures makes any reality anew. And based on domestic industry, all new possibilities are promised to be realized in a new life cycle.

We agree on the same consensus in Eurasia land and seek a new core of the world. As we see, we have new diplomacy in a region, and there are changes in the world power balance.

The redevelopment of regions must be under new standards, and new technologies must be used in the reality we have in life.

A new transportation system must connect all core capitals. These are based on all new alliances between Asia and Europe.

From the point of view of national security, all these cooperation could agree on peace, and we have all new space development under any alliance with the universe.

These are the possibilities we could have to cooperate with the world. And there are new futures we could propose.

Politics makes all decisions. Under the full cooperation of new development of region must be gathered all representatives and share same vision even as the world vision.

These are the ideas of a new future. And we could plan them under its realizations.

Unifying all races and nationalities may serve as a new reality, which may be called the future of the world.

Who could lead them? Without a doubt, it comes with politics.
