

After Oil age with OPEC

Kuroda International

Takeshi Kuroda

Moving toward to new energy that OPEC's financial income must be lost for all. That means politics must make decision.

As I could recommend to build new society under their financial deposit. Core of academics in the world that must spend own effort to prepare those environments to gather all talent from whole Asia with financial aid.

Industry must build up himself as the highest technology and systems that hold its capital 51% of self and invite all industry from the world with tax advance.

Social infrastructure must move to Society 5.0 with political plans.

These decision with own participation to Unification of Asia could build own new presence to the world.

These are moving to next generation of technology with any field of society and with cooperated with Asia for all space participations.

These are opposite with existence of reality but political decision may forward to the futures.

They must spend all their deposit for all these changes to stay remain with the world.
