

An idea of unification of the world

KURODA International Consulting

Takeshi Kuroda

If we agree with the future, we can find a world unification.

A unified government gives standardized social infrastructure and system. All bureaucrats with the skill and ability create a world anew.

Unification gives in any field its unification. We have a new contact with the universe. We are trying to offer a world framework.

A new world with the full cooperation of all races and nationalities. We now face a new possibility to expand to the future.

We are trying to share all ideals and futures. That means we have a new creation of the world.

We now have a new technology and progress that gives full use for a new future.

A new future contains all future of the people. What can we find with unifications? That means we are served equal opportunity in the world.

This might be a challenge to see all truth of the world. But we need a future.

If all reality makes a world, what can we find in a new world? That we are trying to make new possibilities.

We could make a decision. The decision gives a reality. That is a world with a new future.

How could we design the world? We may find all dreams and ideals.
