

Birth rate with 2.0 person as all necessity for construction for society and life

Kuroda International Consulting

Takeshi Kuroda

In France, we find a birth rate of 2.0. That is all remarks we must be sure of since this proves that correct society and life give a right nation.

Comfortability and flexibility give the progress of life that requires all its infrastructure and environment of society. The system of society is the growth of each person and its progress that we have to consider.

We are facing an age of society 5.0 that advance reality and life with new technologies.

A proper understanding of politics and government has a possibility for the future.

We are surprised that all reality and any infrastructure of France is not advanced but the requirement of society and life/ But we have all proof that birth rate is all truth that we need all its understanding on the tail.

Life style must be under all comparing to any nation. Then we find the truth that we need equal environment, infrastructure, and systems.

And we need to know that coming technological progress is the truth, and we may share those bases in the tail of the coming future.

Social construction is based on all progress of any academics. That gives us the idea that we need an educational environment.

We may imagine that under all, its standard is based on moving for society 5.0, giving all progress of its history of self.

These are correct considering human beings and how it is required under any consideration of the history of humankind. The law of society must be more than any considered since this is a priority for human beings to seek the future.
