

Calculation under new technologies

February 20th, 2024

KURODA International Consulting

Takeshi Kuroda

How could we find the future under all its progress in technology? How does the technology have its possibilities?

To expand all our steps into the universe, what can we see in the future? And the economy creates what in the future?

This is the reality that all new technologies hold themselves in. These are with all the development of the economy and the progress of academics.

Under the reconstruction of the nation, we could find all its possibilities. We need political plans to rebuild all realities in the future, and political consensus may have all its possibilities in a nation.

Consensus and political planning in politics and bureaucracy require the creation of these possibilities and futures. These propose the creation of changes in all realities of the nation in the expansion of technological advances: space technology and industry.

Shifting to next generation society and livelihoods may base on the domestic industry with its progress of self. That is under the recalculation of domestic economic policy.

We need all industries in any field of industry under domestic capital. These are the proper economic security we need with ourselves.

They are even producing all military weapons and the future itself.

To make our eyes on the future, the Power game of reality forces us to rebuild ourselves with new technologies. We have a choice, and we need the right choice.

We see a plan as a design we may find in the future.
