

Concluding an alliance between an Asian unity and the EU and building a consensus for Eurasian development

KURODA International Consulting
Takeshi Kuroda

Asking for a new pole and core of the world with Eurasia, we are trying to make a new alliance.

On a table with a complete discussion of the world and region, East meets west gives us new possibilities.

The USA was the world's core in the 20th century, but in the future, with all unification of races, Eurasia comes the center of the world we propose.

How do the all-new technology and academics work in all these realities? We could find all-new possibilities under all new cooperations.

All these are under full cooperation with Asia and Europe. We have all excitement for the future as we find new eras between Asia and Europe.

Both have different roots and backgrounds. How do we find any possibilities under all these cooperations?

New transportation system under standardized, and core city with society 5.0. These are the creation of all new technologies.

We are asking for the new development of land with all new technologies.

As we found that we have a new relationship with space, how could we calculate the future and all new realities?

We have a decision for the future. And it creates a new reality that we could spend ourselves into.
