

Consideration of the new reality of new technology investment and production environment in huge capital

Kuroda International Consulting
Takeshi Kuroda

New technology and advanced industry show enormous investment in developing new reality. We may not reach all new technology, and it has a future. That means the national industrial policy is entirely national security policy.

A free economic system accepts any freedoms in business. To be scared of any reality, we have all champions and winners.

The amount of capital and progressed technology create a new world. Expand to the future under all reality of business own new reality as we have all changes today.

Under a free economic system, we find all domination in advanced technology. Dominance in cutting-edge technology has a high-profit rate. The free trade system protects and expands these dominations.

All academic progress affects business, and the next generation is now a reality as we compete in the market.

Remarks are the amount of capital and progress of technology that gives reality that impossibly reaches identical conditions.

All these are the occupation of the market under market principles. This reality is the proper understanding of all reality of the world.

These are inevitably the permanent fixation on the reality of developed and developing countries.

These are the reality of winner in a market, and business has their laws expanding to the future.
