

Consideration of world war 2nd coming world war 3rd

KURODA International Consulting

Takeshi Kuroda

In Europe, Germany almost took over the whole of Europe. America's entry into the war is a reality given in Japan's declaration of war. This is an if we consider the history.

To have Japan's front lines be Asia and the United States, to have a war on both sides, and to have no possibility would undoubtedly be the wrong choice.

These are the same things today: hatred of the world's financial capital is Axis powers' justice.

These require an understanding that correct perception of reality gives results. Strategy and tactics have the potential to win.

The victory of the USA covers the whole world, and the world follows its lifestyle. We have all new technology that gives us a use for life today.

But putting our eyes in the deepest, we find the Illuminati. There are all similarities in world war 2nd. But world war 3rd is planned, that we all know.

As we see, all space technology existed in world war 2nd. They give all progress from their age to today.

If world war 3rd seeks a full-scale war, we would see the truth as we are in touch with the highest technologies.

Then we have a choice. The choice is a reality we may find in the future. That is all reason politicians must have a responsibility for the future.

And we have to know that hope is a way we can follow.

And a step requires courage. That is a step toward the future.
