

Creating new abundance

January 16<sup>th</sup>, 2025

KURODA International Consulting LLC

Takeshi Kuroda

By achieving new efficiency and productivity along with cutting-edge technologies, we hope to see the adoption of these standards in government, society, and industry and to realize a transition to the next society through political decision-making.

All these are from political consensus and the decision to redesign all societies to reestablish any reality of the nation.

These clearly represent a complete social transformation in political leadership.

New prosperity will guarantee survival, and all citizens will have a chance to participate in a new stage of their pursuit of goals.

These are the futures that political decisions and leadership will make possible, and together with a new national design by talented bureaucrats, they can revolutionize reality.

These will require the development of domestic industry and, once again, a cutting-edge demand for new infrastructure and social development, which will make industrial development possible.

These call for a new social framework and system, propose restructuring society, and propose developing social infrastructure for a new life cycle.

These call for a clear plan and will realize excellent political standards and visions.

These will completely renew the nation and transform the national system. We would like to once again propose participation in the international community under shared rules.

We want to propose reforming all inhumane national realities and realizing a new future with friendships with all nations in the international community.
