

Creation of the future

December 4th, 2024

KURODA International Consulting LLC

Takeshi Kuroda

At COP 29, Mandating zero carbon emissions for all energy, industry, vehicles, and homes and transitioning to new energy sources would propose a 20% increase in product prices to transition to this new reality for all. These will achieve the agreed goal of zero emissions and the transition to a circular economy.

The abolition of war outlaws it and proposes a shared future in peace. These agreements will lead to significant global disarmament, a shift towards a Space Force, and a new global defense posture in space technology development.

Developing new infrastructure and standardizing standards for new technologies will propose a new way of sharing society and life in all regions of the world.

They propose a shift from today's world reality of competition and conflict to a new future based on the agreement of all nations.

Its unity and declaration in the world also demonstrate cooperation with the galaxy and universe as new members join the cosmos and realize new possibilities for the future.

All these are the end of all history and the beginning of the new future under all cooperation and agreement of all nations.

With technological advances, we will move from a history of survival demands and conflict to the creation of new abundance, guaranteed survival, and the pursuit of purpose.

It also demands complete philosophical reflection on the world and reconstructs all world systems.

All these are the proposals to the United Nations for their declaration from our office of Kuroda International Consulting LLC.
