

## Creation of the reality

October 15<sup>th</sup>, 2023

KURODA International Consulting

Takeshi Kuroda

New technology permits new possibilities for the world. New life and society are under all systematized and use of all these technologies.

The Next society is from all academic considerations and calculations. We also need its fundamentals with philosophy.

We are trying to recreate the world. We now have all the potential with reality as all technologies. All these make it possible to seek a new society and nation.

Peace could be shared under all agreements of any nation. Political consensus could ask for the use of new technologies to build new realities.

A new world where people can live happily can be created based on an agreement of peace.

We have to say goodbye to all tears as we find them in all history. The ideals of humankind may not differ in any race or the roots.

These could be any basis for the creation of the new world. We may ask for all these consensus in international society.

To share the world and the future, we could seek unification of the world.

Instead of any tragedy, all children's dreams could be any world agreement.

Politics could lead the world in all new creations. The future must be promised with all our hopes and decisions.

We are facing a new future that could be possible under our steps. As we see all movies from Holly Wood, they may be our future.
