

Crisis of China

April 7th, 2025

KURODA International Consulting LLC

Takeshi Kuroda

New tariff policy tries to change the reality of the global economy. It is causing the collapse of free trade systems.

Instead of all those realities, we may propose new world economic rules. Given the global economy's confusion, we may ask for new dialogue and agree on new regulations and laws for economies.

Today, we have all the progress of technology and systems that occupy the global market with its presence of all technologies. These are the new habits of reality we find today.

The world is governed by the top presence of the USA with its top industries. But on the other hand, we have all our necessities to seek our futures.

China must be rejected from the global economy under the new world conflict. That is the same as Japan, as what occurred in World War 2.

We can see that the economy is the basis for any reality of a nation as a society. The world may not insist on any conflict. So, we have all our necessities to propose a new world vision and framework.

Instead of any reality of the economy today, we may propose and share new world economic principles.

If these are the agreement of fairness, we can solve any occupation by massive capital with its economy.

The world has two choices. One is governed by power, but the other is to dialogue and agree on new principles.
