

Demands of the era of next-generation transformation

Kuroda International Consulting

Takeshi Kuroda

Any fields of society and the world shift to new generation systems and technologies. We have to be prepared for all recent changes.

There come new efficiency standards and all comfortability and use for new realities. We must know, and making all these shifts gives us a future.

All bases of academics are needed, and cooperation with politics could give a new possibility to the world.

These are the revolution of technology and new energy system, and all industries are shifting under the free economic system.

Under all these understandings, we have to build a new political and administrative plan. The new world is waiting for us in the future.

We could ask for a reconstruction of society and nation under all new technology and, communication, transportation system. That causes us to make laws under society 5.0.

We must reach the idea that all new technology and reality standards have more than useful for any field of nation and society. These force a shift to a new generation standard.

All these are also from universities under all calculations of academics. That means a new education system and the improvement of the university environment are the creation of the future.

As we must know, all these are from a new political consensus. We could make a new vision and plan for all new realities of the nation.

Even space development and the development of technology in the military could expand all new possibilities to use for society. We are trying to create a new world as we are trying to form our office.
