Takeshi Kuroda

Chinese electric cars have been banned from the American and European markets. This means that developing the country's next-generation industries is an economic policy. The free trade system seeks to protect these industries. From this perspective, it is possible to view today's industrial structure globally.

And we find economic security in the world politics. Are these things to be affirmed?

If we find the truth, all these are the power game that is always the reality of international Politics. And we have to know who follows justice and dreams and who has failed himself.

Reality gives us only permission to participate in the world.

It is easy to understand that behind these free trade systems lies an international financial system, which is under complete control.

And we have to ask for the future in any reality. How could we forecast all coming realities?

All these systems are the control of the world by the liberal camp. This must be true.

All these truths may ask us to create our economic group. These are under our national security to ask for all our protections.

We are facing all the reality of the power game. Then we have a decision to follow them or ask for our independence.

Under my understanding, independence is always a proper decision in any politics.

And more, we must face the coming reality of the wars. We need to have our bases of ourselves to ask for any possibility in the future. This must be a decision of the politics.
