

Economic grouping and its reality in semiconductors

Kuroda International Consulting

Takeshi Kuroda

The huge capital base in semiconductors can predict the future in that comparison. These are the predictions that the world economy will dominate completely in globalization and unification.

These new global standards must be accepted. This is the basis of all economic systems.

Together with these, the reality of capitalism values capital, and international financial capital is behind them. In the above and these truths, it is clear what is meant by the grouping of economies.

The reality of the power game means that equality to these only gives the future. Others have no choice but to enslave.

These are the truths and the necessity of security in the economy.

Because of these realities, the unification of all Asia will give equality with the world, the proposal of a new world based on self-ideas will provide tremendous changes to the world, and truth and judgment will give the world victory and defeat. can be done.

If our choice is to win, we must be the smartest.

Victory always comes with courage, defeat always comes with fear.
