Economic statement

2022/3/30

Takeshi Kuroda

An economy is truly a tool for survival and life. But with reality, it seeks wealth, and the law is wealth.

Free trade and a free economy are a competition by wealth. It gathers all reality. Technology and capital occupy all reality.

There must be all control by the economy within a world. All reality of life is based on an economy and business.

Demand has a trend and moving with new products. This is the right point for a company to ask about its marketing. Data analysis gives the right standing point to the world market.

Macro economies are based upon capital and currency. These are all based on industry. Micro economies are with their income and have demand for products.

The free trade system unifies the world's market, but it has competition and not true ideals.

A free economy is based upon competition, and capitalism permits ownership. These occupy the wealth.

Wealth gap and occupation. It is a reality of the world. This comes with competition from free economy systems.

The other truth is that the exploitation of wealth gives possession of wealth. This causes hierarchy in an economy with wealth.

Wealth causes wealth that is a reality of the stock market.

ACCESS TO THE WORLD

These mentioned former comes bases to construct business and economy as it is with good explanation by the free economy and free trade system. It comes different from the Chicago group. But both are true. That is all irony in reality.

Huge capital has control of the economy of its base. National banks and currencies have control of the economy.

Back in the business field, there is the creation of the world. This excitement is with a business rule called competition.

The amount of GDP is all bases on national income. That soundness of national finance comes with a debt of finance that may be cleared under income balance that gives running of the nation with correctness.

The efficiency of production is all progress of ages. There are moving new environment of production. It is automated under machinery and IT systems. As you may imagine, that new efficiency standard gives a new profitable environment to the company. This new economic system guarantees its core competence.

How could the company find its guarantee for its construction? Marketing and world safes, analyzing, price competitiveness, efficiency, capital strength. These are under a decision from its representatives.

The company could ask own independence with originality and actions. This challenge of the company with economy must be proper. That is called its independence.

Currency value the nation. The amount of wealth decides the world. The economy has a creation of wealth. These are creating all realities.

This is a reality of capitalism and any economic system. Wealth is an all decision that any participation of economy.

There is all illusion that business trend has. Wealth inequality is trustworthy and has the

ACCESS TO THE WORLD

creation of poverty. Economic ethics are powerless against the competition for wealth.

All admiring are a winner of all these competitions. On the other hand, the economy serves any demand on lives.

This irony is both true under the economic system today. Asking any philosophical considering economy is a tool of lives with its demand. The excitement and trend are gathering wealth under all competition principles.

The market principle is as same as the competition principle. These give an all progress of lives and technology. That is why we do not doubt all systems and are willing to participate with all reality.

In the other reality, the occupation of wealth is under construction by the competition principle. All these have a hierarchy of truths, even with the economy.

Its unbalance is creating a new reality with the highest technology and systems. To be considered with all tails that require bases of economy. Contemporary capitalism must be based upon equal grounds that may not be with the occupation of wealth.

As philosophical considering to economy that we have to reach all its moral, fairness must be the bases of competition, and that only permits winners of all competitors.

A free economy and trade system like capitalism allow proper of all ownership. It covers all demands to renew reality. All these are based upon wealth. Under moral desire for wealth must be judged with a new world.

The Chicago School's definition of completeness of the free economic system exists in American wealth. Poverty in third countries cannot be constantly affirmed.

Any reality could be judged from different points of view. Wealth and the poor may not have the same decision.

ACCESS TO THE WORLD

The global economy is with capital and currency rate under with business effect. All creation of GDP is creating wealth and insurance life. Free trade is making its globalization with standardization.

Economy first makes it the purpose. But the economy asks his intention to serve lives. Money economy with competition is an absolute reality by now.

Under all these realities, macroeconomy exists under currency and its control. GDP of its creation gives its action with these. Growth in the economy is needed with new technology and systems. This is the proper measure of the world. If the new technology owns the world, we may consider all futures.

The economy under the political plan and decision decide all reality. These are the proof we may rely on.

A free economy fills up any demand of the market, even society. But the engine is with profit. That is the logic of irony. We see all company morale and business rules, but business as an economy may not away from all truth.

Stock is the value of the company as decided by the market. This ownership is the reality of capitalism. And market principle and competition principle give all truth of economy and business.

These continuously create wealth. That proves wealth is all tails that give an economy. On the other hand, we know communism but the Chicago group opposes this. To be wise, we see the truth that communism is failed by lack of all freedom, even in the economy. The western camp does not doubt his justice. These are all world realities, but under new calculation by the philosophy that humanity as a business moral could seek an answer. A wealth gap gives all problems under competition, but we may seek new world rules.

Globalization is all reality today. The economy is standardized and unified in its market by all participants. The International Trade and Industry ministry may not ask for its industrial

independence within all nations. Top companies control the Trade system.

The pie of the economy is equally proved with capital. That means money has control of the economy.

All International funds are asking for new investment in new technology. This is a trend in business and reality today.

The amount of capital only permits its participation.

This is proof that the economy has an occupation of self.
