

For a new trend of industry 4.0 in Tesla's factory

KURODA International Consulting

Takeshi Kuroda

What exists in the product system ideally sifts to the new reality. We are facing the future even forward to an unknown destiny.

New quality standards are from machinery production, so we may secure products and rely on new production systems.

All new systems are the latest trend, and all manufacturers must follow all new realities. We must ask for all comparing of efficiency, and new quality requirements must be needed for further quality control.

All new measures need new standards for a company. We have all progress of eras that we have to be changed in the future.

As we can remark, efficiency and system quality are new production measures. These are the newly generated manufactural environment,

But we must deeply consider sifting all new environment. Existing and all new systems have different methods.

Machinery production and IT control change its quality control, which works better than existing.

Under mass production, if we could guarantee the same quality, it is a specialty of machinery production. And it is the difference from what exists.

Time is more than any faster, which gives a new reality in business. But only to be conquered self in business means we have to clear all subjects to step into the new reality.
