

Fostering cutting-edge industries

KURODA International Consulting

Takeshi Kuroda

We have all new realities and technology under its use for life and society.

We must cause all advanced industries under our ownership of self. There are under national industrial security policy to make any bases for them.

Economic measures by bureaucrats must cover all industries and be equipped with state-of-the-art technology, owning capital, and fostering initiatives by creating plans.

These are the only permission and fundamentals we are trying to put our steps into the world. That means it is only permission we make any step into the future.

You may ask me what proof is. If the Western camp is an angel, I must be wrong. But if they're the wolves in Little Red Riding Hood, I'm right.

If someone tries to take ownership of the future, even everything in itself. We have to be prepared for the future.

We must recognize that these are necessarily 180° conversions of the current situation. It also requires Drucker's creation of the Next Society.

There is national security in all divided. Army and space technology, food security, and economic security. The only future possible is to realize equality in all of these in the self-group with respect to the world.

We need all human sources for the creation of new realities. These must be under all political decision and plan to seek hope in the future.

We need proper judgment and decisions. Especially with a politician, these are the only possibility that we want you to know about.
