

Free economic system and free trade

Kuroda International Foundation

Takeshi Kuroda

This free economy and trading system, which, like amoeba, provides the fulfillment and progress of its demands and needs, the unrestricted activity of freedom fills its progress and supply. This presence is the possession of wealth.

The reality of liberalism, which is based on social progress and sociology in the West, has its core competence and social progress in both wheels.

This contradiction is the reality of world ownership.

This Mobius ring should definitely give a self-destruction. This double-edged sword gives the existence of a socially vulnerable person.

It is the fallen man who robs the world.

This proves that the ideals of equality and humanity have truth. This proves that a relief system for the vulnerable is required for its help and permanence.

This proves that the development from Western values to Eastern values can exist in reality.

This is not the shift of civilization, but the truth of the reality of the world's demands.

The reality of the coming future civilization always requires humanity to make choices. Passing through the door of Gethsemane leads to the future.

In the free economic system, participation in self-reliance is the principle, and the victors have this.

War dominates the past, and the battlefield of the new principle of competition seeks the real possession of eternity.
