

Globalization and a new economy

Kuroda International Consulting

Takeshi Kuroda

Money makes money. This is a reality of capitalism.

We are facing new technology and systems. They are asking for a new world. In the business field, they have a celebration of the new world today.

We find a new rule with GAFAM. Business is changed under the new standard.

New technology changes the value of the economy. It gives more importance to the reality.

All these are the proof that requirement from a reality gives a worth to the world.

Back in the old ages, it was handicrafts, but we are facing industry 4.0 and the progress of MBA learning. What can you find in factories from old age to today?

There is new efficiency in the top trend of industries. That is a law that we have to know.

Without any doubt, we have a future. And technological progress may be found in them. We have to calculate how the future goes with its business.

The business makes money. And now we have economic security. To be wise, we may not follow justice but a reality.

Stepping into reality with a law of today, we have the possibility to create our own reality in the world. Business gives us a chance.

Skill and ability give us reality as much as it is.

We have a right to the future. And you may ask me what. That is an action to the future itself.
