

Industrial security

Kuroda International

Takeshi Kuroda

The upcoming changes should be given all the need for their self-security response. Independence in currency, industry, military and politics make it possible to respond to change in self-decision.

Security in self-industry calls for reconsideration of the free trade system in trade agreements and demands security in self-development of advanced industries. These require the development of domestic industries in the aircraft, military industry, OS, CPU, and all other fields.

The turmoil in the world means that the state is required to have industrial security for its presence in advanced industries, such as in default and the transition to a new monetary system.

These are urgently required to plan the construction of their own industry and foster their political presence.

These are the top presences in the industry that make wealth occupancy a reality. Therefore, industrial security is required in the conclusion of bilateral treaties.

The alliance between NATO, AUKUS and Israel will enable the construction of a new world. Therefore, participation in reality change in the alliance of Asian countries requires equal self.
