Create the future

Inflation and default

KURODA International

Takeshi Kuroda

As we may imagine, money is sucked up with new economic systems. There is a new world system and inflation, default.

Under all reality, industry and business must face new markets.

Now we are seeing new technologies and the growth of the new society. That must continuously ask the future.

This is a new business standard that we equally participate with the new world.

It is wise, as GAFAM and mage company could gather all capital income with new systems. And they have all creation of the future.

This asks two divines of the world as nations ask about their financial environment.

Above, we may know the new world.

This is how WASP and Jewish cover and own the world but the others.

This new economic system asks for a high expense to face the reality of a new world.

You may circulate how all industry asks their steps to a new world.

Free trade system only could gather all its capitals.
