

Japan and other national bankruptcies and considerations in the new economic environment

Kuroda International

Takeshi Kuroda

These should be considered leading to anarchism. Along with the truth of the Corona disaster, the exposure of the truth in the world will make a big difference.

National bankruptcy calls for economic market participation in new currency rates. It is easy for Western countries to abandon free trade under the protection of their economies.

On the other hand, the unification of Asia must confront these realities by closing its market and fostering its industry.

In these realities, what can be considered is that Western countries demand a new future on their own. The current technological innovation will give a contemporary society and life. These are politics and other industries, and the Asian Unification Corps must always build its culture, energy, and politics based on this standard.

Also, the unification of the army is the only choice to participate in the current state of the world. There is no choice but to deal with these realities in constructing self-life of its independence and the foundation of cooperation with its base of politics and contrary as participating with the universe.

These require the Asian Unification Corps to have the same political foundation. There is an urgent need to develop the same political environment and foundation, such as information collection and analysis, political planning and analysis, and data conversion.

Along with the transition to a unified digital currency, achieving the unification of Asia and the construction of socio-politics in the gathering of human resources requires that agreement.

These must realize the management of the unified corps as the economic policy in the region shifts to a controlled economy in the semi-public and semi-private sectors.

The transition to a new social system, along with the development of Society 5.0, will carry out a transformation within the region.
