

Judgment of the correct society in the fertility rate

Kuroda International Consulting

Takeshi Kuroda

The birth rate is an index to a correct society. When human life is given, normalization of fertility is given. This is an accurate understanding of the creation of a proper society.

A proper society serves proper life. That must be the correct understanding of any politics. They have a duty and necessity to build an appropriate life and society.

These are the things that urban planning and social maintenance require based on correct understanding. The coming future has a new reality of Society 5.0. In these, the foundation of society remains unchanged.

As we found them in France with their life and society. These are the ideals. But it may not be ideal, but we must know this reality.

We may imagine paradise under all new technologies. There is more than any possibility with all this progress we have today. But we need the right tail of them.

These must be any consensus of politics. And we need the right plan for them.

Society and life must be served under a political plan. And they have all possibility to work for all new realities.

They can propose new realities in which life and survival are fully guaranteed in the progress of the times. These are what make fertility correctness possible with the new civilization.

As we face society 5.0 today. And these are the idea we could find a new social system.

These are all from politics that they have all possibility to make a new.

And let me ask a question? Who has a decision?
