

New design of society

October 11th, 2024

Kuroda International Consulting LLC

Takeshi Kuroda

All new technology and systems cause us to have a new future that includes more than all new possibilities and societal progress.

We now have a free economic system in which they create a new world with voluntary rules.

All new changes and shifts in world consensus are this. All these are necessary to move toward new futures.

We can imagine a new technological civilization. There are the proper forecasts for the future. Any progress in technology and systems creates a new reality called a new world.

These are the evolutionary changes we have today. These are transitions from the past generation's past to a new future, where the collapse of the existing system and the new reality coexist today.

So, we must determine whether to discard the past and choose a new future. A new future is contained by more than any possibility.

All reality's efficiency and productivity grow, and it makes everything comfortable. These are the new social and governmental systems of a new society.

Then, we need to accept new rules such as zero-emission and Circular Economy. How could we imagine a new society with a new livelihood?

We are facing new hopes in the future, and if politics determines itself in all its decisions and actions, we can find a new world.

It is true that these are future constructions in liberalism, but they can also be done in a controlled society.
