

New economic map of the world

November 3rd, 2023

Kuroda International Consulting

Takeshi Kuroda

The currency rate with the highest technology must be settled in national industries. These have a free trade system, and the global market is occupied with its trading system.

These are the proper understanding of national economic policy. We need to know the truth. Only then could we plan and take any actions.

Massive capital has a decision of economy, and we all know it exists and is seeking its purpose.

And now we see a new economic map in the world. We have to consider the reality of the economy in the Western camp. They do not need any help from the others.

The currency's value is an amount of the nation's economy. The highest technology creates wealth continuously for the future under the free trade system.

It must be understood that the Western camp has complete food and economic security.

We need the same condition as they are.

All these are the proper strategies for the unification of Asia as we try to make all our realities as a group.

Under any consideration by politics, this must be known as their cunning. As we know, they are not good man.

We need to build all our realities with our cleverness. We need the right ideas and actions.

We find that we have to have a world strategy to ask for our security. National security is any basis we could ask for the future.
