

New partnership in space

KURODA International Consulting Takeshi Kuroda

Expanding with a new possibility in the future, we are trying to ask for a step into the universe.

As we know as a common, there are all aliens in space. We are trying to cooperate with them and share new realities.

These are new alliances and cooperation on all reality and the coming future.

We have a new possibility for the future as we find new technologies.

We show our declaration to them and ask for the possibility of any cooperation.

We have to make an alliance under both benefits as we found that we step into the whole universe in their technical licensing.

From the age of world war 2nd, there is all cooperation with a universe on the earth to reach today. And we have a new space age today.

How do we find a demand of all theirs? And we have to know what they seek.

We insist on both benefits. These are partnerships, not dependencies, proposing new realities of cosmic participation.

We have to give all our ideas to them. What we want and seek.

These require consensus building in deliberation and severe dialogue and can realize the construction of the reality of the future.

These are the agreement of possibility in the future. That forces us to make a clear vision and dialogue.

These are based on stepping into the space in the new ages.
