Digitalized reality asks for all control under computers. Computers govern this society, and all this comfort and efficiency gives us progress in life.

And we have two others. We now have a new step into the universe. We may calculate all the information and build a new plan.

One last thing comes from all the progress of academics and philosophy. These are the new permissions for the latest creation of the world.

Children's growth may not be controlled, but it is righteous growth to be in touch with their future purpose.

These are the proper bases for the new creation of the nation and society. We are determined to build a new world.

We must clarify that all these technological civilizations and reality are different from the past. We are trying to make all new realities.

And we see that any progress in academics equals improving any reality. That is a proper idea for us to make a whole new reality.

Our reality with the world is that all these creations are given under a free economic system.

We could ask for all divorce from the past and put our steps on new realities. All these are the creation under new generation technologies.

It is possible to entrust the future to outstanding human resources. To surpass America is to have a future.
