Takeshi Kuroda

We are trying to make the whole universe our new stages and the future. These are the concept which we are trying to cooperate with all regions of the universe and make new development in space technologies.

We may find all the progress of technologies with new uses for life and societies.

These are national projects carried out in secret from a political standpoint. By providing these new technologies to the private sector, they will dramatically accelerate industry and space development.

Undoubtedly, Majestic 12 and other spacecraft possess this technology, and we, too, will be called upon to realize these dramatic technological advances based on our cooperative relationships with space.

By demonstrating their participation in space, they can join agreements and organizations in that universe and propose the formation of a new self-presence as reality on Earth changes.

Cooperation with the military, the construction of bases, and the convening of talent will shape these realities, and this cutting-edge will transform the nation's entire reality.

Understandably, there are many different kinds of beings in the universe, so unequal treaties and enslavement are rejected. Superior cooperation and dialogue with good beings are required to create a shared reality.

All these must change our reality and our presence in the world、 and it changes all our reality to engage in dialogue with any nation.

Then, we may gather all the world's realities under a new consensus and form groups facing the world's other side.
