Takeshi Kuroda

All the above titles represent the reality of the world asking for a monopoly of the future. Under all these realities, we have our own decisions and choices.

The creation of one's economic group may stand against the world with one's reality possessed by self.

Capitalism permits the possession of the world that we have to know.

Based on one's economic power, it permits and makes it possible for people to form an economic group.

This is the reality: we may stand equally to the world under equal presence.

We even have to possess our financial power. These are our choices to put ourselves in a world power game.

We must know that any complex may seek only failure, but if we seek victory, we need to avoid it.

If we ask to see any nations of the world who may desire all technology and industrial powers? These are the basis of our cooperation in building our justice and philosophies.

Equality is only permitted under equal fundamentals and basis. This is all the reality of the world.

Our new diplomacy permits all these realities to cooperate with any nations that mutually benefit.

They have all their tails. That means we have all the possibility to stand equally to the world.
